

I claim:

1. A solid composition comprising an organic spill absorbing material in which is absorbed certain of a liquid organic compound or composition that includes a substance selected from the group consisting of a halogenated organic; a fire retardant that is not the halogenated organic; a stupefying agent that is not the halogenated organic; and a combination thereof.

2. The solid composition of claim 1, wherein the organic spill absorbing material is water insoluble, particulate polymer particles that imbibe liquid organic materials.

3. The solid composition of claim 2, wherein the liquid organic compound or composition is the halogenated organic.

4. The solid composition of claim 1, wherein the halogenated organic is a halogenated hydrocarbon.

5. The solid composition of claim 2, wherein the halogenated organic is a halogenated hydrocarbon.

6. The solid composition of claim 3, wherein the halogenated organic is a halogenated hydrocarbon.

7. The solid composition of claim 1, wherein the liquid organic compound or composition is a fire retardant.

8. The solid composition of claim 2, wherein the liquid organic compound or composition is a fire retardant.

9. The solid composition of claim 3, wherein the liquid organic compound or composition is a fire retardant.

10. The solid composition of claim 7, wherein the fire retardant is a halogenated organic.

11. The solid composition of claim 1, wherein the liquid organic compound or composition is a stupefying agent.

12. The solid composition of claim 2, wherein the liquid organic compound or composition is a stupefying agent.

13. The solid composition of claim 3, wherein the liquid organic compound or composition is a stupefying agent.

14. The solid composition of claim 11, wherein the stupefying agent is a halogenated organic.

15. A method of fighting a fire comprising transmitting a

solid composition, which embraces an organic spill absorbing material in which is absorbed certain of a liquid organic compound or composition that includes a suitable flame retardant, to a base of the fire under conditions such that said absorbed liquid in liquid or vapor form is released.

16. The method of claim 15, wherein the organic spill absorbing material is water insoluble, particulate polymer particles that imbibe liquid organic materials.

17. The method of claim 16, wherein the liquid organic compound or composition is a halogenated organic.

18. A method of providing for stupefaction of a living target comprising transmitting said solid composition containing a suitable stupefyer under conditions such that vapors of said stupefyer are released and stupefy the target.

19. The method of claim 18, wherein the organic spill absorbing material is water insoluble, particulate polymer particles that imbibe liquid organic materials.

20. The method of claim 19, wherein the liquid organic compound or composition is a halogenated organic.
